

Even Odd Scoop

Materials: container of counters, several different sized spoons

1. Scoop a spoonful of counters.
2. Group the counters into pairs.
3. Show how many counters you have and whether the number is even or odd. If a number is even, all of the counters will be in pairs. If a number is odd, there will be one leftover counter that cannot be paired.
4. Repeat as time allows.

I know that ___ is an even number because all of the counters are in pairs.

I know that ___ is an even number because all of the counters are in pairs.

I know that ___ is an odd number because there is one leftover counter that cannot be paired.

I know that ___ is an odd number because there is one leftover counter that cannot be paired.
