

# Division Squares

$$20 \div 2$$

$$50 \div 5$$

**Materials:** Division Squares board, division cards, calculator

**Number of Players:** 2

1. Shuffle the division cards and place them facedown in a pile. Player 1 turns over the top card in the pile, reads the problem aloud and names the quotient.
2. Player 2 uses a calculator to check the answer. If the answer is correct, Player 1 may draw one line segment on the board to connect two dots.
3. Player 2 turns over a card, reads the problem aloud and names the quotient. Player 1 checks the answer.
4. Players continue to take turns. A player who draws a line segment to complete a square writes his or her initials inside it. The player may then draw one extra line segment on the board.
5. At the end of the playing time, players calculate their scores. Each box with initials is worth 1 point. The player with the most points wins the game.
