

# Numerical Expressions Clock

---

1. Use four 4's to create problems that will equal 1-12. Remember to use the order of operations when solving your problems.

**Example:**  $1 = 44 \div 44$ , or  $1 = (4 \times 4) \div (4 \times 4)$

1 = \_\_\_\_\_      2 = \_\_\_\_\_      3 = \_\_\_\_\_      4 = \_\_\_\_\_

5 = \_\_\_\_\_      6 = \_\_\_\_\_      7 = \_\_\_\_\_      8 = \_\_\_\_\_

9 = \_\_\_\_\_      10 = \_\_\_\_\_      11 = \_\_\_\_\_      12 = \_\_\_\_\_

2. Design a clock face. Use the numerical expressions you created in place of the numerals 1-12.
